Invesco

Summary Prospectus **December 20, 2023**

BKLN Invesco Senior Loan ETF

NYSE Arca, Inc.

Before you invest, you may wish to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus, reports to shareholders, and other information about the Fund online at www.invesco.com/etfprospectus. You can also get this information at no cost by calling Invesco Distributors, Inc. at (800) 983-0903 or by sending an e-mail request to etfinfo@invesco.com. The Fund's Prospectus and Statement of Additional Information, both dated December 20, 2023 (as each may be amended or supplemented), are incorporated by reference into this Summary Prospectus.

Investment Objective

The Invesco Senior Loan ETF (the "Fund") seeks to track the investment results (before fees and expenses) of the Morningstar® LSTA® US Leveraged Loan 100 Index™ (the "Underlying Index").

Fund Fees and Expenses

This table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the Fund ("Shares"). **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and example below.**

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)

Management Fees	0.65%
Other Expenses	None
Acquired Fund Fees and Expenses[1]	0.02
Total Annual Fund Operating Expenses	0.67
Fee Waiver and/or Expense Reimbursement[2]	0.02
Total Annual Fund Operating Expenses After Fee Waiver and/or Expense Reimbursement	0.65

1 "Acquired Fund Fees and Expenses" are indirect fees and expenses that the Fund incurs from investing in the shares of other investment companies. Please note that the amount of Total Annual Fund Operating Expenses shown in the above table may differ from the ratio of expenses to average net assets included in the "Financial Highlights" section of this prospectus, which reflects the operating expenses of the Fund and does not include indirect expenses such as Acquired Fund Fees and Expenses.

2 Through August 31, 2025, Invesco Capital Management LLC (the "Adviser") has contractually agreed to waive a portion of the Fund's management fee in an amount equal to 100% of the net advisory fees an affiliate of the Adviser receives that are attributable to certain of the Fund's investments in money market funds managed by that affiliate. This waiver will have the effect of reducing the Acquired Fund Fees and Expenses that are indirectly borne by the Fund. The Adviser cannot discontinue this waiver prior to its expiration.

Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The example assumes that you invest $10,000 in the Fund for the time periods indicated and then sell all of your Shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the Fund's operating expenses are equal to the Total Annual Fund Operating Expenses After Fee Waiver and/or Expense Reimbursement in the first year and the Total Annual Fund Operating Expenses for periods thereafter. This example does not include brokerage commissions that investors may pay to buy and sell Shares. Although your actual costs may be higher or lower, your costs, based on these assumptions, would be:

1 Year	3 Years	5 Years	10 Years
$66	$212	$371	$833

Portfolio Turnover. The Fund pays transaction costs, such as commissions, when it purchases and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate will cause the Fund to incur additional transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in Total Annual Fund Operating Expenses or in the example, may affect the Fund's performance. During the most recent fiscal year, the Fund's portfolio turnover rate was 129% of the average value of its portfolio.

Principal Investment Strategies

The Fund generally will invest at least 80% of its total assets in the components of the Underlying Index.

Strictly in accordance with its guidelines and mandated procedures Morningstar, Inc. ("Morningstar" or the "Index Provider") compiles, maintains and calculates the Underlying Index, which tracks the market value weighted performance of the largest institutional leveraged loans based on market weightings, spreads and interest payments. Pursuant to a benchmark administration agreement with the Index Provider, S&P Dow Jones Indices LLC ("S&P DJI" or the "Benchmark Administrator") serves as the benchmark administrator for the Underlying Index. Invesco Capital Management LLC (the "Adviser") and the Fund's sub-adviser, Invesco Senior Secured Management, Inc. (the "Sub-Adviser"), define senior loans to include loans referred to as leveraged loans, bank loans and/or floating rate loans. Banks and other lending institutions generally issue senior loans to corporations, partnerships or other entities ("borrowers"). These borrowers operate in a variety of industries and geographic regions, including foreign countries.

Senior loans often are issued in connection with recapitalizations, acquisitions, leveraged buyouts and re-financings. Senior loans typically are structured and administered by a financial institution that acts as agent for the lenders in the lending group. The Fund generally will purchase loans from banks or other financial institutions through assignments or participations. The Fund may acquire a direct interest in a loan from the agent or another lender by assignment or an indirect interest in a loan as a participation in another lender's portion of a loan. The Fund generally will sell loans it holds by way of an assignment, but may sell participation interests in such loans at any time to facilitate its ability to fund redemption requests.

To be included in the Underlying Index, leveraged loans must be senior secured, denominated in U.S. dollars and must have a minimum initial term of one year and a minimum par amount of $50 million. A leveraged loan is rated below investment grade quality or is unrated but deemed to be of comparable quality. The Fund will invest in loans that are expected to be

below investment grade quality and to bear interest at a floating rate that periodically resets. The Underlying Index may include, and the Fund may acquire and retain, loans of borrowers that are in default.

As of October 31, 2023, the Underlying Index was comprised of 100 constituents.

The Fund does not purchase all of the securities in the Underlying Index; instead, the Fund utilizes a "sampling" methodology to seek to achieve its investment objective.

Concentration Policy. The Fund will concentrate its investments (i.e., invest 25% or more of the value of its total assets) in securities of issuers in any one industry or group of industries only to the extent that the Underlying Index reflects a concentration in that industry or group of industries. The Fund will not otherwise concentrate its investments in securities of issuers in any one industry or group of industries.

Principal Risks of Investing in the Fund

The following summarizes the principal risks of investing in the Fund.

The Shares will change in value, and you could lose money by investing in the Fund. The Fund may not achieve its investment objective.

Market Risk. Securities in the Underlying Index are subject to market fluctuations. You should anticipate that the value of the Shares will decline, more or less, in correlation with any decline in value of the securities in the Underlying Index. Additionally, natural or environmental disasters, widespread disease or other public health issues, war, military conflicts, acts of terrorism, economic crises or other events could result in increased premiums or discounts to the Fund's net asset value ("NAV").

Index Risk. Unlike many investment companies, the Fund does not utilize an investing strategy that seeks returns in excess of the Underlying Index. Therefore, the Fund would not necessarily buy or sell a security unless that security is added or removed, respectively, from the Underlying Index, even if that security generally is underperforming. Additionally, the Fund rebalances its portfolio in accordance with the Underlying Index, and, therefore, any changes to the Underlying Index's rebalance schedule will result in corresponding changes to the Fund's rebalance schedule.

Senior Loans Risk. The risks associated with senior loans are similar to the risks of fixed income securities that are rated non-investment grade (commonly known as "junk bonds"), although senior loans typically are senior and secured, whereas junk bonds often are subordinated and unsecured. Investments in senior loans typically are below investment grade and are considered speculative because of the credit risk of their issuers. Such companies are more likely to default on their payments of interest and principal owed, and such defaults could reduce the Fund's NAV and income distributions. An economic downturn generally leads to a higher non-payment rate, and a senior loan may lose significant value before a default occurs. There is no assurance that the liquidation of the collateral would satisfy the claims of the borrower's obligations in the event of the non-payment of scheduled interest or principal, or that the collateral could be readily liquidated. Economic and other events (whether real or perceived) can reduce the demand for certain senior loans or senior loans generally, which may reduce market prices. Senior loans and other debt securities also are subject to the risk of price declines and to increases in prevailing interest rates, although floating-rate debt instruments such as senior loans in which the Fund may be expected to invest are substantially less exposed to this risk than fixed-rate debt instruments. No active trading market may exist for certain senior loans, which may impair the ability of the Fund to realize full value in the event of the need to liquidate such assets. Adverse market conditions may impair the liquidity of some actively traded senior loans. Longer interest rate reset periods generally increase fluctuations in value as a result of changes in market interest rates.

Some loans are subject to the risk that a court, pursuant to fraudulent conveyance or other similar laws, could subordinate the loans to presently existing or future indebtedness of the borrower or take other action detrimental to lenders, including the Fund, such as invalidation of loans or causing interest previously paid to be refunded to the borrower. Investments in loans also are subject to the risk of changes in legislation or state or federal regulations. If such legislation or regulations impose additional requirements or restrictions on the ability of financial institutions to make loans, the availability of loans for investment by the Fund may be adversely affected. Many loans are not registered with the SEC or any state securities commission and often are not rated by any nationally recognized rating service. Generally, there is less readily available, reliable information about most loans than is the case for many other types of securities. Although a loan may be senior to equity and other debt securities in a borrower's capital structure, such obligations may be structurally subordinated to obligations of the borrower's subsidiaries.

There is no organized exchange on which loans are traded and reliable market quotations may not be readily available. Therefore, elements of judgment may play a greater role in valuation of loans than for securities with a more developed secondary market and the Fund may not realize full value in the event of the need to sell a loan. To the extent that a secondary market does exist for certain loans, the market may be subject to volatility, irregular trading activity, wide bid/ask spreads, decreased liquidity and extended trade settlement periods, any of which may impair the Fund's ability to sell loans within its desired time frame or at an acceptable price and its ability to accurately value existing and prospective investments. Extended trade settlement periods for certain loans may result in cash not being immediately available to the Fund upon sale of the loan. As a result, the Fund may have to sell other investments with shorter settlement periods or engage in borrowing transactions to raise cash to meet its obligations. Newly originated loans (including reissuances and restructured loans) may possess lower levels of credit document protections than has historically been the case. Accordingly, in the event of default, the Fund may experience lower levels of recoveries than has historically been the norm.

Risk of Investing in Loans. Investments in loans are subject to interest rate risk and credit risk. Default in the payment of interest or principal on a loan will result in a reduction in its value. Although the loans in which the Fund may invest generally are secured by specific collateral, there can be no assurance that such collateral will satisfy the borrower's obligation in the event of non-payment of scheduled interest or principal or that such collateral could be readily liquidated. In the event of the bankruptcy of a borrower, access to the collateral may be limited by bankruptcy or other insolvency loans. There is no organized exchange on which loans are traded and reliable market quotations may not be readily available. Therefore, elements of judgment may play a greater role in valuation of loans than for securities with a more developed secondary market. To the extent that a secondary market does exist for certain loans, the market may be subject to volatility, irregular trading activity, wide bid/ask spreads, decreased liquidity and extended trade settlement periods, any of which may impair the ability to sell loans within a desired time frame or at an acceptable price. Extended trade settlement periods for certain loans may result in cash not being immediately available upon sale of the loan. Some loans are subject to the risk that a court, pursuant to fraudulent conveyance or other similar laws, could subordinate the loans to presently existing or future indebtedness of the borrower or take other action detrimental to lenders, such as invalidation of loans or causing interest previously paid to be refunded to the borrower. Investments in loans also are subject to the risk of changes in legislation or state or federal regulations. If such legislation or regulations impose additional requirements or restrictions on the ability of financial institutions to make loans, the availability of loans for investment may be adversely affected. Many loans are not registered with the SEC or any state securities commission and often are not rated by any nationally recognized rating service. Generally, there is less readily available, reliable information about most loans than is the case for many other types of securities. Although a loan may be senior to equity and other debt securities in a borrower's capital structure, such obligations may be structurally subordinated to obligations of the borrower's subsidiaries.

Risk of Investing in Loans to Non-U.S. Borrowers. The Fund may invest all or a portion of its assets in loans of non-U.S. borrowers. The Fund's

investments in loans of non-U.S. borrowers may be affected by political and social instability; changes in economic or taxation policies; difficulties when enforcing obligations; decreased liquidity; and increased volatility. Foreign borrowers may be subject to less regulation resulting in less publicly available information about the borrowers.

Fixed-Income Securities Risk. Fixed-income securities are subject to interest rate risk and credit risk. Interest rate risk refers to fluctuations in the value of a fixed-income security resulting from changes in the general level of interest rates. When the general level of interest rates goes up, the prices of most fixed-income securities go down. When the general level of interest rates goes down, the prices of most fixed-income securities go up. Fixed-income securities with longer maturities typically are more sensitive to changes in interest rates, making them more volatile than securities with shorter maturities. Credit risk refers to the possibility that the issuer of a security will be unable and/or unwilling to make timely interest payments and/or repay the principal on its debt. Debt instruments are subject to varying degrees of credit risk, which may be reflected in credit ratings. There is a possibility that the credit rating of a fixed-income security may be downgraded after purchase, which may occur quickly and without advance warning following sudden market downturns or unexpected developments involving an issuer, and which may adversely affect the liquidity and value of the security.

Changing Fixed-Income Market Conditions Risk. Increases in the federal funds and equivalent foreign interest rates or other changes to monetary policy or regulatory actions may expose fixed-income markets to heightened volatility and reduced liquidity for certain fixed-income investments, particularly those with longer maturities. It is difficult to predict the impact of interest rate changes on various markets. In addition, decreases in fixed-income dealer market-making capacity may also potentially lead to heightened volatility and reduced liquidity in the fixed-income markets. As a result, the value of the Fund's investments and share price may decline. Changes in central bank policies could also result in higher than normal redemptions by APs (as defined herein), which could potentially increase the Fund's portfolio turnover rate and transaction costs.

Risks of Loan Assignments and Participations. As the purchaser of an assignment, the Fund typically succeeds to all the rights and obligations of the assigning institution and becomes a lender under the credit agreement with respect to the debt obligation; however, the Fund may not be able to unilaterally enforce all rights and remedies under the loan and with regard to any associated collateral. Because assignments may be arranged through private negotiations between potential assignees and potential assignors, the rights and obligations acquired by the Fund as the purchaser of an assignment may differ from, and be more limited than, those held by the assigning lender. In addition, if the loan is foreclosed, the Fund could become part owner of any collateral and could bear the costs and liabilities of owning and disposing of the collateral. The Fund may be required to pass along to a purchaser that buys a loan from the Fund by way of assignment, a portion of any fees to which the Fund is entitled under the loan. In connection with purchasing participations, the Fund generally will have no right to enforce compliance by the borrower with the terms of the loan agreement relating to the loan, nor any rights of set-off against the borrower, and the Fund may not directly benefit from any collateral supporting the loan in which it has purchased the participation. As a result, the Fund will be subject to the credit risk of both the borrower and the lender that is selling the participation. In the event of the insolvency of the lender selling a participation, the Fund may be treated as a general creditor of the lender and may not benefit from any setoff between the lender and the borrower.

Collateral Securities Risk. Collateral may include obligations issued or guaranteed by the U.S. government, its agencies and instrumentalities, including bills, notes and bonds issued by the U.S. Treasury, money market funds and corporate debt securities, such as commercial paper.

Some securities issued or guaranteed by federal agencies and U.S. government-sponsored instrumentalities may not be backed by the full faith and credit of the United States, in which case the investor must look principally to the agency or instrumentality issuing or guaranteeing the security for ultimate repayment, and may not be able to assert a claim against the United States itself in the event that the agency or instrumentality does not meet its commitment. The U.S. government, its agencies and instrumentalities do not guarantee the market value of their securities, and consequently, the value of such securities may fluctuate. Although the Fund may hold securities that carry U.S. government guarantees, these guarantees do not extend to shares of the Fund.

Money market funds are subject to management fees and other expenses. Therefore, investments in money market funds will cause the Fund to bear indirectly a proportional share of the fees and costs of the money market funds in which it invests. At the same time, the Fund will continue to pay its own management fees and expenses with respect to all of its assets, including any portion invested in the shares of the money market fund. It is possible to lose money by investing in money market funds.

Corporate debt securities such as commercial paper generally are short-term unsecured promissory notes issued by businesses. Corporate debt may be rated investment-grade or below investment-grade and may carry variable or floating rates of interest. Corporate debt securities carry both credit risk and interest rate risk. Credit risk is the risk that the Fund could lose money if the issuer of a corporate debt security is unable to pay interest or repay principal when it is due. Some corporate debt securities that are rated below investment-grade generally are considered speculative because they present a greater risk of loss, including default, than higher quality debt securities.

Industry Concentration Risk. In following its methodology, the Underlying Index from time to time may be concentrated to a significant degree in securities of issuers operating in a single industry or industry group. To the extent that the Underlying Index concentrates in the securities of issuers in a particular industry or industry group, the Fund will also concentrate its investments to approximately the same extent. By concentrating its investments in an industry or industry group, the Fund may face more risks than if it were diversified broadly over numerous industries or industry groups. Such industry-based risks, any of which may adversely affect the companies in which the Fund invests, may include, but are not limited to, the following: general economic conditions or cyclical market patterns that could negatively affect supply and demand in a particular industry; competition for resources; adverse labor relations; political or world events; obsolescence of technologies; and increased competition or new product introductions that may affect the profitability or viability of companies in an industry. In addition, at times, such industry or industry group may be out of favor and underperform other industries or the market as a whole.

When Issued and Delayed Delivery Transactions Risk. The Fund may also purchase and sell interests in senior loans and other portfolio securities on a when issued and delayed delivery basis. No income accrues to the Fund on such interests or securities in connection with such purchase transactions prior to the date that the Fund actually takes delivery of such interests or securities. These transactions are subject to market fluctuation; the value of the interests in senior loans and other portfolio debt securities at delivery may be more or less than their purchase price, and yields generally available on such interests or securities when delivery occurs may be higher or lower than yields on the interests or securities obtained pursuant to such transactions. Because the Fund relies on the buyer or seller, as the case may be, to consummate the transaction, failure by the other party to complete the transaction may result in the Fund missing the opportunity of obtaining a price or yield considered to be advantageous. The Fund will make commitments to purchase such interests or securities on such basis only with the intention of actually acquiring these interests or securities, but the Fund may sell such interests or securities prior to the settlement date if such sale is considered to be advisable. To the extent the Fund engages in when issued and delayed delivery transactions, it will do so for the purpose of acquiring interests or securities for the Fund's portfolio

consistent with the Fund's investment objective and policies and not for the purpose of investment leverage. No specific limitation exists as to the percentage of the Fund's assets which may be used to acquire securities on a when issued or delayed delivery basis.

Non-Investment Grade Securities Risk. All or a significant portion of the loans in which the Fund will invest may be determined to be non-investment grade loans that are considered speculative. The Fund also may invest in junk bonds. Non-investment grade loans and bonds, and unrated loans and bonds of comparable credit quality are subject to the increased risk of a borrower's or issuer's inability to meet principal and interest payment obligations. These securities may be subject to greater price volatility due to such factors as specific corporate developments, interest rate sensitivity, negative perceptions of the non-investment grade securities markets generally, real or perceived adverse economic and competitive industry conditions and less secondary market liquidity. If the borrower of lower-rated loans or issuer of lower-rated bonds defaults, the Fund may incur additional expenses to seek recovery.

Prepayment Risk. The ability of the borrower of a loan to repay principal prior to maturity can limit the potential for gains by the Fund. During periods of declining interest rates, the borrower of a loan may exercise its option to prepay principal earlier than scheduled, forcing the Underlying Index, and therefore the Fund, to replace such a loan with a lower yielding loan. If interest rates are falling, the Fund may have to reinvest the unanticipated proceeds at lower interest rates, resulting in a decline in the Fund's income.

Reinvestment Risk. Reinvestment risk is the risk that the Fund will not be able to reinvest income or principal at the same return it is currently earning. Reinvestment risk is greater during periods of declining interest rates, as prepayments often occur faster. It is related to call risk, since issuers of callable securities with high interest coupons may call their bonds before their maturity date. This may require the Fund to reinvest the proceeds at an earlier date, and it may be able to do so only at lower yields, thereby reducing its return.

Liquidity Risk. Liquidity risk exists when a particular investment is difficult to purchase or sell. If the Fund invests in illiquid securities or current portfolio securities become illiquid, it may reduce the returns of the Fund because the Fund may be unable to sell the illiquid securities at an advantageous time or price.

Issuer-Specific Changes Risk. The value of an individual security or particular type of security may be more volatile than the market as a whole and may perform differently from the value of the market as a whole.

Portfolio Turnover Risk. The Fund may engage in frequent trading of its portfolio securities in connection with the rebalancing or adjustment of the Underlying Index. A portfolio turnover rate of 200%, for example, is equivalent to the Fund buying and selling all of its securities two times during the course of a year. A high portfolio turnover rate (such as 100% or more) could result in high brokerage costs for the Fund. While a high portfolio turnover rate can result in an increase in taxable capital gains distributions to the Fund's shareholders, the Fund will seek to utilize the in-kind creation and redemption mechanism (described below) to minimize the realization of capital gains to the extent possible.

Sampling Risk. The Fund's use of a representative sampling methodology may result in it holding a smaller number of securities than are in the Underlying Index. As a result, an adverse development with respect to an issuer of securities held by the Fund could result in a greater decline in NAV than would be the case if the Fund held all of the securities in the Underlying Index. To the extent the assets in the Fund are smaller, these risks will be greater.

Cash Transaction Risk. Most ETFs generally make in-kind redemptions to avoid being taxed on gains on the distributed portfolio securities at the fund level. However, unlike most ETFs, the Fund currently intends to effect creations and redemptions principally for cash, rather than principally in-kind, due to the nature of the Fund's investments. As such, the Fund may be required to sell portfolio securities to obtain the cash needed to distribute redemption proceeds. Therefore, the Fund may recognize a capital gain on these sales that might not have been incurred if the Fund had made a redemption in-kind. This may decrease the tax efficiency of the Fund compared to ETFs that utilize an in-kind redemption process and there may be a substantial difference in the after-tax rate of return between the Fund and conventional ETFs.

Non-Correlation Risk. The Fund's return may not match the return of the Underlying Index for a number of reasons. For example, the Fund incurs operating expenses not applicable to the Underlying Index, and incurs costs in buying and selling securities, especially when rebalancing the Fund's securities holdings to reflect changes in the composition of the Underlying Index. Because the Fund issues and redeems Creation Units principally for cash, it will incur higher costs in buying and selling securities than if it issued and redeemed Creation Units in-kind. Additionally, the Fund's use of a representative sampling methodology may cause the Fund to not be as well correlated with the return of the Underlying Index as would be the case if the Fund purchased all of the securities in the Underlying Index in the proportions represented in the Underlying Index. In addition, the performance of the Fund and the Underlying Index may vary due to asset valuation differences and differences between the Fund's portfolio and the Underlying Index resulting from legal restrictions, costs or liquidity constraints.

Authorized Participant Concentration Risk. Only authorized participants ("APs") may engage in creation or redemption transactions directly with the Fund. The Fund has a limited number of institutions that may act as APs and such APs have no obligation to submit creation or redemption orders. Consequently, there is no assurance that APs will establish or maintain an active trading market for the Shares. This risk may be heightened to the extent that securities held by the Fund are traded outside a collateralized settlement system. In that case, APs may be required to post collateral on certain trades on an agency basis (i.e., on behalf of other market participants), which only a limited number of APs may be able to do. In addition, to the extent that APs exit the business or are unable to proceed with creation and/or redemption orders with respect to the Fund and no other AP is able to step forward to create or redeem Creation Units (as defined below), this may result in a significantly diminished trading market for Shares, and Shares may be more likely to trade at a premium or discount to the Fund's NAV and to face trading halts and/or delisting. Investments in non-U.S. securities, which may have lower trading volumes or could experience extended market closures or trading halts, may increase the risk that APs may not be able to effectively create or redeem Creation Units or the risk that the Shares may be halted and/or delisted.

Market Trading Risk. The Fund faces numerous market trading risks, including the potential lack of an active market for the Shares, losses from trading in secondary markets, and disruption in the creation/redemption process of the Fund. In stressed market conditions, the market for Shares may become less liquid in response to deteriorating liquidity in the markets for the Fund's portfolio holdings, which may cause a variance in the market price of Shares and their underlying NAV. In addition, an exchange or market may issue trading halts on specific securities or financial instruments. As a result, the ability to trade certain securities or financial instruments may be restricted, which may disrupt the Fund's creation/redemption process, potentially affect the price at which Shares trade in the secondary market, and/or result in the Fund being unable to trade certain securities or financial instruments at all. In these circumstances, the Fund may be unable to rebalance its portfolio, may be unable to accurately price its investments and/or may incur substantial trading losses. Any of these factors may lead to the Shares trading at a premium or discount to the Fund's NAV.

Operational Risk. The Fund is exposed to operational risks arising from a number of factors, including, but not limited to, human error, processing and communication errors, errors of the Fund's service providers, counterparties or other third-parties, failed or inadequate processes and technology or systems failures. The Fund and the Adviser seek to reduce these operational risks through controls and procedures. However, these

measures do not address every possible risk and may be inadequate to address these risks.

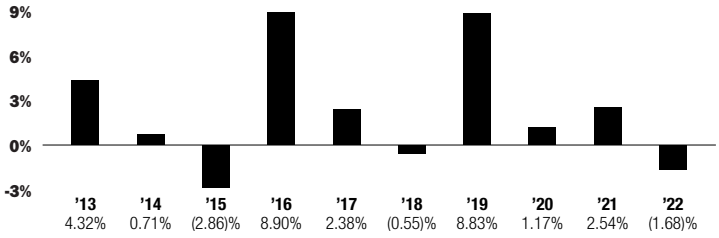

Shares May Trade at Prices Different than NAV. Shares trade on a stock exchange at prices at, above or below the Fund's most recent NAV. The Fund's NAV is calculated at the end of each business day and fluctuates with changes in the market value of the Fund's holdings. The trading price of the Shares fluctuates continuously throughout trading hours on the exchange, based on both the relative market supply of, and demand for, the Shares and the underlying value of the Fund's portfolio holdings. As a result, the trading prices of the Shares may deviate from the Fund's NAV. ANY OF THESE FACTORS, AMONG OTHERS, MAY LEAD TO THE SHARES TRADING AT A PREMIUM OR DISCOUNT TO NAV.

Performance

The bar chart below shows how the Fund has performed. The table below the bar chart shows the Fund's average annual total returns (before and after taxes). The bar chart and table provide an indication of the risks of investing in the Fund by showing how the Fund's total returns have varied from year to year and by showing how the Fund's average annual total returns compared with a broad measure of market performance and an additional index with characteristics relevant to the Fund. The Fund's performance reflects fee waivers, if any, absent which performance would have been lower. Although the information shown in the bar chart and the table gives you some idea of the risks involved in investing in the Fund, the Fund's past performance (before and after taxes) is not necessarily indicative of how the Fund will perform in the future.

Updated performance information is available online at www.invesco.com/ETFs.

Annual Total Returns—Calendar Years

	Period Ended	Returns
Year-to-date	September 30, 2023	8.40%
Best Quarter	June 30, 2020	5.01%
Worst Quarter	March 31, 2020	-9.05%

Average Annual Total Returns (for the periods ended December 31, 2022)

	Inception Date	1 Year	5 Years	10 Years
Return Before Taxes	3/3/2011	-1.68%	2.00%	2.31%
Return After Taxes on Distributions		-3.59	0.30	0.58
Return After Taxes on Distributions and Sale of Fund Shares		-1.00	0.81	0.99
Morningstar® LSTA® US Leveraged Loan 100 Index™ (reflects no deduction for fees, expenses or taxes)		-0.68	3.06	3.23
Morningstar® LSTA® US Leveraged Loan Index™ (reflects no deduction for fees, expenses or taxes)		-0.77	3.27	3.65

After-tax returns in the above table are calculated using the historical highest individual federal marginal income tax rates and do not reflect the impact of state and local taxes. Actual after-tax returns depend on an investor's tax situation and may differ from those shown, and after-tax returns shown are not relevant to investors who hold Shares through tax-advantaged arrangements, such as 401(k) plans or individual retirement accounts.

Management of the Fund

Investment Adviser. Invesco Capital Management LLC (the "Adviser").

Investment Sub-Adviser. Invesco Senior Secured Management, Inc. (the "Sub-Adviser").

Portfolio Managers

The following individuals are responsible jointly and primarily for the day-to-day management of the Fund's portfolio:

Name	Title with Adviser/Trust	Date Began Managing the Fund
Peter Hubbard	Head of Equities and Director of Portfolio Management of the Adviser; Vice President of the Trust	March 2011
Gary Jones	Portfolio Manager of the Adviser	January 2012
Scott Baskind	Head of Global Senior Loans and Chief Investment Officer of the Sub-Adviser	March 2011
Seth Misshula, CFA	Head Trader and Portfolio Manager of the Sub-Adviser	February 2014

Purchase and Sale of Shares

The Fund issues and redeems Shares at NAV only with APs and only in large blocks of 100,000 Shares (each block of Shares is called a "Creation Unit") or multiples thereof ("Creation Unit Aggregations"), generally in exchange for the deposit or delivery of cash. However, the Fund also reserves the right to permit or require Creation Units to be issued in exchange for a basket of securities. Except when aggregated in Creation Units, the Shares are not redeemable securities of the Fund.

Individual Shares may only be bought and sold in the secondary market (i.e., on a national securities exchange) through a broker or dealer at a market price. Because the Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (at a premium), at NAV, or less than NAV (at a discount). An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (bid) and the lowest price a seller is willing to accept for Shares (ask) when buying or selling shares in the secondary market (the "bid-ask spread").

Recent information, including information on the Fund's NAV, market price, premiums and discounts, and bid-ask spreads, is available online at www.invesco.com/ETFs.

Tax Information

The Fund's distributions generally are taxed as ordinary income, capital gains or some combination of both, unless you are investing through a tax-advantaged arrangement, such as a 401(k) plan or an individual retirement account, in which case your distributions may be taxed as ordinary income when withdrawn from such account.

Payments to Broker-Dealers and Other Financial Intermediaries

If you purchase Shares of the Fund through a broker-dealer or other financial intermediary (such as a bank), the Fund's distributor or its related companies may pay the intermediary for certain Fund-related activities, including those that are designed to make the intermediary more knowledgeable about exchange-traded products, such as the Fund, as well as for marketing, education or other initiatives related to the sale or promotion of Shares. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson or financial adviser to recommend the Fund over another investment. Ask your salesperson or financial adviser or visit your financial intermediary's website for more information.
